question that doctors asks for each time

question that doctors asks for each time

1. morning stiffness

2. what is your pain killer 1-10

hard to quantify chronic pain

//8 cannot be contant, harder to explain

pain scale = dysfunction - more accurate represetation

eg: miminal dysfunctional in terms of task completion,.

mid - pain but manage to work a couple of hours

extreme end - couldn't get out of bed

eg: miminal dysfunctional in terms of task completion,.

mid - pain but manage to work a couple of hours

extreme end - couldn't get out of bed

medication <-> subjective pain scale

visualization

if not pain scale then allergy

symptoms <-> medication visualization corrrelation

not just data backlog management/ but also insights and analytics

"how acutely do you feel the chronic pain right now"

how incapable/ incapacitated do you feel today

<6 is routine work possible;
6 is bed;
8 is painkillers

all really depends on the planned/ unplanned routine/ schedule/ activities
